

The process of working with assignment 1 has given me practical experience with the process of creating a design file, and later translate the design in to an app. Regarding that i had a clear vision for the design, and my earlier experience with Figma, creating the design felt like a straight forward process. Although i was happy with the frame quite quickly, i chose to spend a bit more time to create reusable Figma components and tidy up the design a bit. Afterwards i am glad i put in the extra work, as it feels more professional. I was heavily inspired by the Spotify "now playing" screen. Reflecting on it, i would rather design my own screen the next time, as i believe that would be more engaging for me.

Translating the design to code was the hardest part of the assignment. When i have programmed interfaces earlier i usually design on-the-go, without a strict plan to follow. In this case i tried to make the app as similar to the design as possible. This was more difficult than my usual approach, but i learned more from working this way. Working this way forced me to not settle for "almost", or taking the easiest way out. Instead i worked to understand the code, and make it correct. Looking back at the process i was a bit frustrated sometimes, because it did not always work out as expected, but i believe this made understand and learn more. The next time i will probably not make the same mistakes again.
